Executive Summary

Wet shaving is a technique that is used by a person to groom him with the help of shaving products like shaving creams/foams/soaps, shaving brush, razors and after shave lotions. Wet shaving is a traditional method of shaving. Shaving is most commonly practiced by men to remove their facial hair. Shaving products are broadly classified into three broad categories: pre, during and after shave.

As compared to wet shaving, dry shaving is the latest trend followed by men specially by youth generation. Dry shaving is the art of shaving without the use of any water or having foams/soaps. This type of shaving is mostly done with the help of an electric razor. Shaving razor is one of the key products in the wet shaving kit. Large varieties of razors are available in the market in which straight razors are the oldest one and electric razors are the latest one. There are 5 types of razors available in the market: straight razor, disposable razor, electric razor, cartridge razor and safety razor.

The global wet shaving market is growing rapidly over the past few years and is anticipated to increase further in the forecasted period i.e. 2016-2020 tremendously. Global wet shaving market is expected to increase on the back of rising demand for women shaving products, increasing disposable income, growing population, growing demand for battery operated razors and emergence of internet as primary distribution channel etc. Yet there are certain challenges such as increasing sales of electric razors, rising trend of unshaved hair among men, high replacement cost of razor cartridges and high cost of technological advanced products etc. that obstruct the growth of the market.

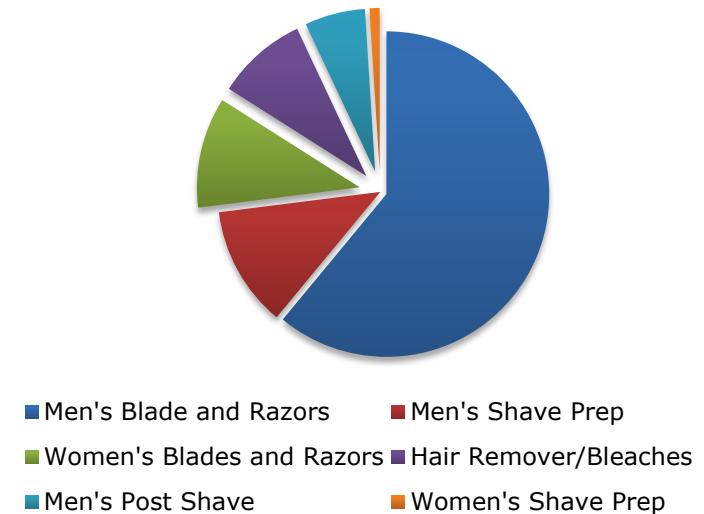

Global Wet Shaving Market

The global wet shaving market is estimated to be valued at US\$.....in 2015, up by approximatelyas compared to 2014.
