Global Autoimmune Disease Therapeutics Market

Executive Summary

An autoimmune disease is a condition in which the body's immune system attacks and destroys healthy cells and tissues in the body by mistake. In other words, autoimmune disease arises when the immune system fails to distinguish between the body's own cells and foreign cells. These diseases can affect any part of the body.

Autoimmune disease therapeutics is a form of treatment to calm the overactive immune response, to limit tissue damage, and to reduce pain and inflammation. Treatment can also help in relieving symptoms like pain, swelling, and skin rashes.

There are a lot of therapeutic alternatives available, but no option has a perfect safety profile. Infact, while some treatments have been effective in treating certain autoimmune disorders, no treatment is effective for all autoimmune diseases.

The autoimmune disease therapeutics market can be segmented on the basis of drug class (Immunosuppressant's, Anti-inflammatory Drug, Interferons, NSAIDs, Antihyperglycemics, and Others); indication (Rheumatoid Arthritis, Multiple Sclerosis, Inflammatory Bowel Disease, Type 1 Diabetes, Psoriasis, and Others); and distribution channel (Hospital & Clinics, Pharmacies, Drug Stores, Online Stores, and Others).

The global autoimmune disease therapeutics market has increased significantly during the years 2018-2020 and projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The autoimmune disease therapeutics market is expected to increase due to rapid urbanization, escalating healthcare spending, rising prevalence of autoimmune diseases, favorable government initiatives, etc. Yet the market faces some challenges such as high cost involved, lack of approved treatment for IPF (Idiopathic Pulmonary Fibrosis), etc.
