Global Pest Control Market

Executive Summary

Pest control is the process of eliminating pests or preventing them from reproducing, developing, or migrating. Pests can cause major problems, such as health issues, depending on the kind of species they are. Not only that, but bugs can cause property harm because they infest buildings, crops and the whole environment. Because of the presence of house flies, bed bugs, cockroaches, and other insects in areas where there are human activities, pest control management has become increasingly crucial in recent years. In 2021, the global pest control market was valued at US\$22.01 billion, increased from US\$20.83 billion in 2020. The market is expected to grow at a CAGR of 5.10% over the years 2022-2026.

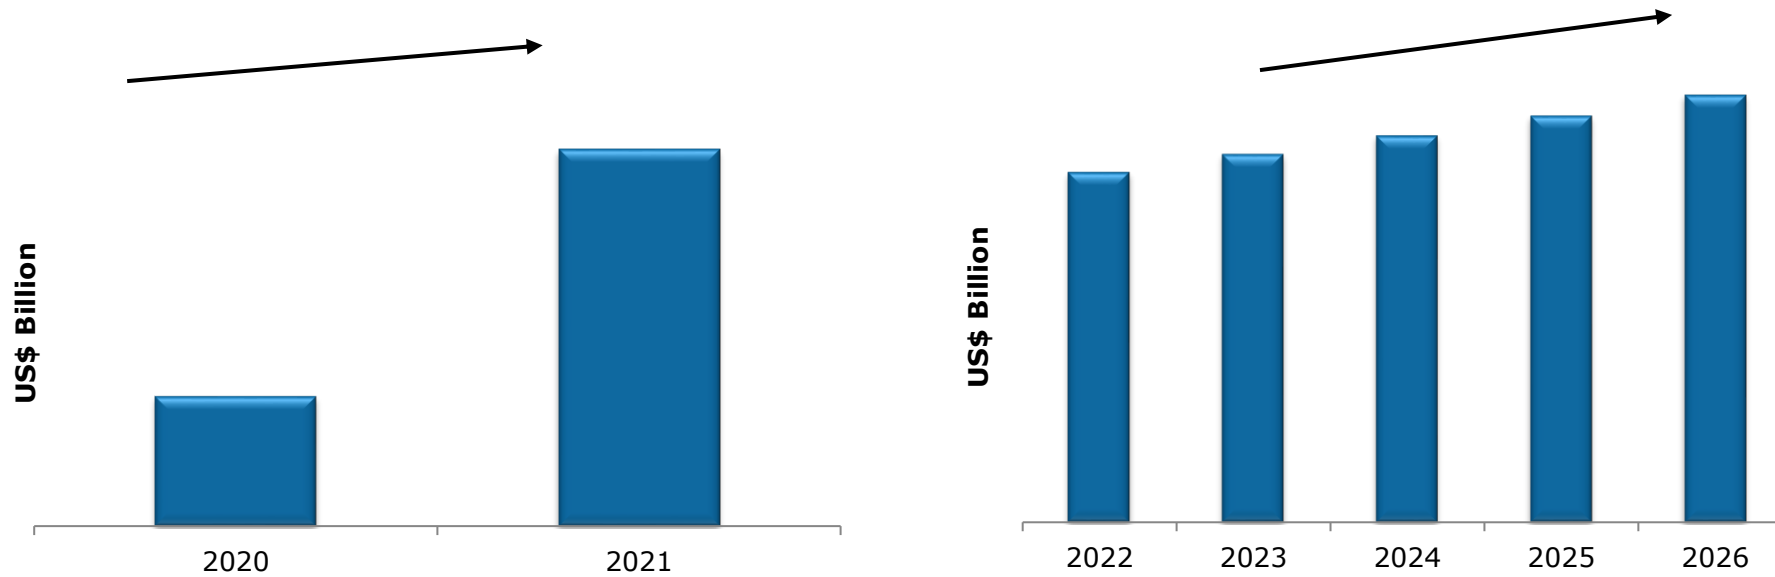

The global pest control market can be segmented based on method (Chemical, Mechanical, Biological and Others); pest type (Insect, Termite, Rodent and Others); and Application (Commercial, Residential, Agricultural and Others). The chemical pest control dominated the market in 2021. Chemical pest control is highly effective and one product can control several different pest. The biological pest control market is expected to grow at the highest CAGR during the forecast period, driven by the rise in organic farming.

The pest control market was first hampered by the drop in procedures due to the pandemic. The rise in reopening of economies and surge in economic activities in the second half of 2020 has resulted in a resurgence in pest control revenue around the world. The adoption of new technologies and procedures would boost the global pest control market forward in the coming years.

The global pest control market has increased in 2021. The projections are made that the market would rise in the next four years i.e. 2022-2026 tremendously. The global pest control market is expected to increase due to the changing climate condition, rapid urbanization, infrastructure development, rising industrial activities, rise in the number of fatal vector-borne diseases, rising awareness about cleanliness, hygiene and health, etc. Yet the market faces some challenges such as rising concerns regarding the harmful impact of pesticides, lack of skilled manpower in developing region, etc. Moreover, the market growth would succeed by various market trends like adoption of AI technologies, increasing demand of IoT devices, adoption of modern technologies like CRISPR and IGRs, IPM, shift towards biopesticides etc.
