# Global Video Surveillance Market

## Executive Summary

Surveillance is the act of carefully watching or monitoring any activity or any person, in order to prevent or detect a crime. Video surveillance systems are defined as an electronic means of watching someone or something. Video surveillance is used in areas that may need monitoring such as banks, stores, and other areas where security is needed.

Video surveillance systems are a system of one or more video cameras on a network that send the captured video and audio information to a certain place. The information is monitored live or transmitted to a central location for recording and storage and is not available to the public as the signal is not openly transmitted. Video surveillance systems have various advantages, like, helps in preventing theft, loss, public security, gathering evidence, remote video monitoring, etc. But video surveillance systems have privacy issues and can be hacked.

The video surveillance market has been segmented on the basis of technology, end user and equipment. Video surveillance is based on two major technologies, Analog video surveillance system and IP video surveillance system. Video surveillance systems have wide end uses, like, Commercial, Infrastructure, Military And Defense, Residential, Public Facility and Industrial. Equipment in video surveillance system are Security Cameras, Boxed DVRs & NVRs, Enterprise & IP Video Storage, VMS, Encodes etc.

The global video surveillance market has increased at a significant CAGR over the years and projections are made that the market would rise in the next four years i.e. 2018-2022 tremendously. The video surveillance market is expected to increase due to increasing safety concerns, rising urban population, upsurge in infrastructural investment, growing Artificial Intelligence etc. Yet the market faces some challenges such as privacy and security issues, high maintenance cost, etc.
