Global Schizophrenia Drugs Market

Executive Summary

Mental illness refers to a condition that affects a person thinking ability, feeling, personality, and behavior as well. It is believed that mental illness is rare but in contrast it is a common and high in prevalence. Mental disorders lead to mild to severe instabilities in behavior/thinking process which ultimately resulted into one's person disability to manage with life's everyday chores. Mental illness is broadly categorized into four categories: anxiety disorders, eating disorders, schizophrenia and psychotic disorders, mood disorders, and dementia.

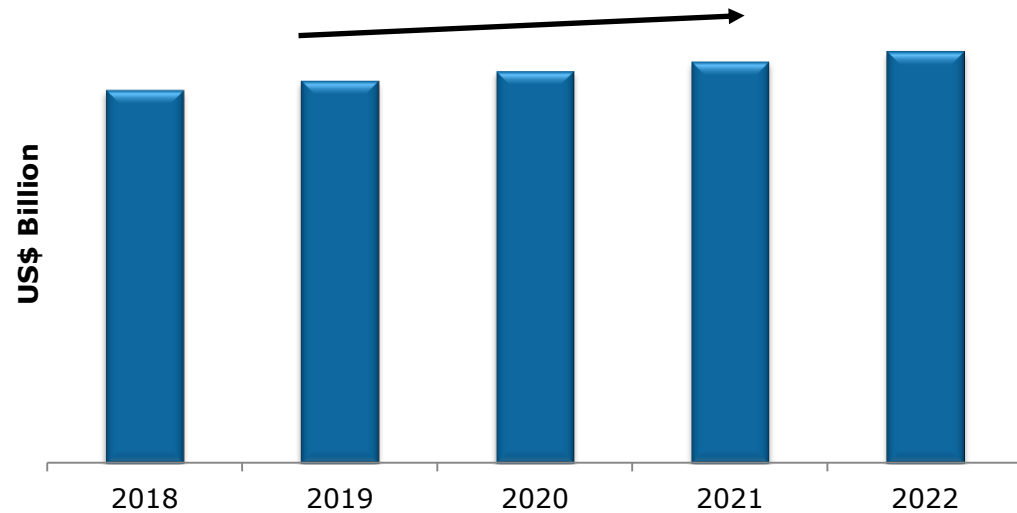

Schizophrenia is considered as one of the severe mental disorder that hinders the person's capacity to think clearly, decision-making, inability to handle emotions etc. It is highly complex in nature as it cannot be easily determined and considered as a long-term illness. Schizophrenia can affect in any phase of life but mostly found in person aged between 20-40 years.

The global schizophrenia drugs market has shown rising trends over the past few years and anticipations are made that the market would grow at a steady pace in the next four years i.e. 2018 to 2022, particularly due to increasing prevalence of schizophrenia globally. The global schizophrenia market is supported by various growth drivers such as increasing number of patients seeking treatment, rising healthcare expenditure, improvement in healthcare infrastructure etc.

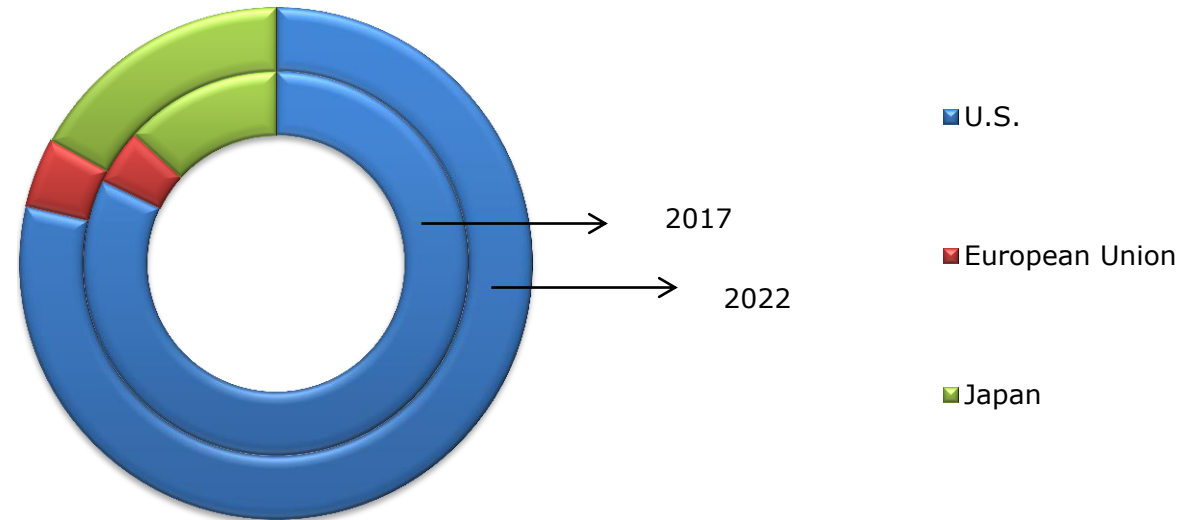

Yet the market growth is restrained by some challenges like side-effects associated with drugs, major expiration of patented drugs, and social stigma of mental health conditions. In the coming years, the market would be primarily driven by technological advancements, new products launch, increasing utilization of long-acting injectable antipsychotics.
