The US Onychomycosis Market

Executive Summary

Onychomycosis is a condition of fungal nail infection. Onychomycosis begins in the nail bed and progresses to the nail plate, causing the nail to become discolored, deformed, and even separated from the nail bed. Onychomycosis has a significant chance of reoccurrence. Of all the nail abnormalities in the world, around 50% are the case of onychomycosis. In most of the cases it occurs in the toenails. Onychomycosis is not a life threatening disease but, may persist or worsen if not treated.

Symptoms of onychomycosis are changes in appearance of the nail, interference with standing, walking, and exercising, pain, discomfort, etc. The causative pathogens of onychomycosis include dermatophytes (most common), Candida, and nondermatophytic molds.

There are five types of Onychomycosis: Distal Subungual Onychomycosis, White superficial onychomycosis, Proximal subungual onychomycosis, Endonyx onychomycosis and Candidal onychomycosis. Two types of treatments are available of onychomycosis: Oral Treatment and Topical Treatment. Oral treatment includes: Terbinafine, Itraconazole, etc. and topical treatment includes Kerydin, Jublia, etc. Nonpharmacologic approaches are also there, which includes the following: Laser treatment, Photodynamic therapy, etc.

The US onychomycosis market is forecasted to grow at a healthy growth rate during the forecast period (2021-2025). The US onychomycosis market is supported by various growth drivers, such as rising per capita healthcare expenditure, increasing diabetic patients, ageing population, introduction of new drugs, etc. Yet, the market faces certain challenges, such as, reimbursements, low awareness, side effects, etc.
